Re: Hydraulically dredge main entrance to Edward C. Grace Memorial Harbor 2/07/24

Terran Corporation and Hochwalt excavating have entered a teaming agreement to provide this proposal to Hydraulically dredge sand/silt from the main fairway of the harbor for the safety and functionality of the Harbor. Our services will include:

Crisafulli SD-110 dredge
1200 ft pipe
Mobilization/Demobilization
Project management, oversight and inspection of completed work.

Our team intends to provide dredging services for the removal of approximately 5,000 cu/yds of sand/silt from the harbor entrance. The spoils material is to be pumped to an existing beach that has been identified and provided by the village. The spoils area is to be constructed and restored by a separate contractor and is not included in this quote. The cost for the scope of work provided is \$112,500 not to exceed the removal of more than 5,000 cu/yds. All work performed will be complete by 5/15/24 as required. Thank you for the opportunity to provide our services for your environmental needs.

Joshua Brittingham
Project manager

Hochwalt Excavation -Dredging Division

Experience advanced Hydraulic dredging services with Hochwalt Excavation! We specialize in quickly and efficiently removing sediments and debris from water bodies. Our state-of-the-art equipment targets areas that require dredging while imposing minimal impact to the surrounding environment.
