

Attached is a proposal for a custom work barge and trailer for The Grace Memorial Harbor. I have also included some pics of a build we are just completing to give you an idea of the quality and components you can expect to see. Here is a list of the main components of the proposed barge:

- 26' barge that is 101" wide, it will have a flat working surface with diamond plate for slip resistance.
- 150 hp Suzuki 4 stroke
- 8k Hydraulic Crane
- Rub rails and tie downs
- T-top that can fold down
- Gas power Pack
- 16' spuds
- Work lights/nav lights
- Radio, charging station, inverter
- 96 Gallon fuel capacity
- Gooseneck trailer, 7k torsion axle, brakes, load range f tires, guides

We went to the harbor and lifted the docks, maneuvered our boat, and checked depths to verify size and lifting requirements. The goal was to make this a safe, easy to use barge that can handle a variety of tasks.

If you choose to proceed with Northshore Dock and Marine we would like to review the design with the Harbormaster and make sure we are checking all the boxes. One large benefit Northshore is we are local and are here working year round. If your barge needs service, storage, training etc we are available to do all these in a timely manner.

I appreciate your consideration and am available for any further questions
